

Playful by design
Timeless custom furniture,
Swiss quality.
Evolving with you –
for generations.

Cleaning and care

You are the owner of a timeless piece of design, made in Switzerland. USM represents classic design by combining elegance and technical perfection.

The USM Modular Furniture systems are defined by their longevity. That is achieved in part by their versatility but is also the result of careful material selection and the strictest quality standards used in their production.

With product-specific, gentle care, you can ensure that your USM furniture will look brand new even after many years of use.

USM Haller and all table surfaces

Dry cleaning

Standard cleaning without water should be done with a soft cloth*.

Wet cleaning

A soft cloth* or chamois is suitable for wet cleaning; wet the cloth with water, wring it out and use the damp cloth for cleaning. In the case of more severe soiling, only use a diluted neutral cleaning fluid (pH < 9).

Never leave the table surface wet or damp for long, as there is a risk that it could absorb water. Never use abrasive cleaning agents or sponges. Some microfiber cloths can have an abrasive action and should therefore be avoided. Never use solvents.

Oiled veneer table surfaces

The table surfaces should be oiled every 4 to 12 months, as required, to keep them in good condition.

1. Remove coarse dirt.
2. Clean table surface with a moist cloth*.
3. Apply a thin layer of furniture oil with a cloth*.
4. Finally, polish the surface until it is dry.

USM Haller Soft Panels USM Privacy Panels USM Inos

Cleaning without water

The surface can be cleaned of dust and mild dirt with a vacuum cleaner. Vacuum attachments with brushes should be avoided. The other furniture parts (metal or plastic) can be wiped with a damp cloth*.

Cleaning with water

In the case of more stubborn dirt, a damp cloth* and, if needed, gentle cleaning agents (e.g., glass cleaner) may be used. One should rub with as little force as possible, since the surface may otherwise become altered.

Fibers that protrude or are torn out should not be ripped off, since this may result in more fibers becoming detached. Instead, we recommend cutting off the protruding fibers carefully.

* We recommend the USM cloth.
